

CEMENT AND CONCRETE REFERENCE LABORATORY

PROFICIENCY SAMPLE PROGRAM

**Final Report
Portland Cement Proficiency Samples
Number 213 and Number 214**

CCRL
Cement and Concrete
Reference Laboratory

September 2019

www.ccrl.us

September 20, 2019

To: Participants in the CCRL Portland Cement Proficiency Sample Program

SUBJECT: Final Report on Portland Cement Proficiency Samples No. 213 and No. 214

Following is the final report for the current pair of CCRL **Portland Cement** Proficiency Samples which were distributed in July 2019. Portland Cement Sample No. 213 and Portland Cement Sample No. 214 were ASTM C150 cements meeting the specifications of Type V, and contained limestone additions.

This report consists of a statistical Summary of Results, a set of general Scatter Diagrams, and associated detailed information. The Table of Results with individualized information for participating laboratories can be downloaded at our website located at: <http://www.ccrl.us/>. Additional information is provided in the following pages.

The CCRL Proficiency Sample Programs are intended for internal use by the laboratory as a tool to identify potential problems in laboratory procedures or test equipment and to initiate remedial actions. These programs are designed to complement the CCRL Laboratory Inspection Program as part of a total quality system. Care should be taken when using this program for any other purpose.

Additional samples of these two cements and other CCRL samples are available for purchase. These samples may be useful for equipment verification, technician training, and research. Contact CCRL for availability and price.

It is presently anticipated that the next Portland Cement Proficiency Samples will be distributed in January 2019.

Sincerely,

Kent Niedzielski
Program Manager, Proficiency Sample Programs
Cement and Concrete Reference Laboratory

SUBJECT: Explanation of Final Report on Results of Tests for Portland Cement Proficiency Samples No. 213 and No. 214

This letter, and the material included with it, constitutes the final report, and summary of results for the current pair of Portland Cement Proficiency Samples, which were distributed in July 2019. This material includes a Table of Results for individual laboratory data, a statistical Summary of Results, and a set of general Scatter Diagrams. Your unique laboratory number is displayed at the top of the individual Table of Results.

An explanation of the program is contained in the paper: "Statistical Evaluation of Interlaboratory Cement Tests" by J. R. Crandall and R. L. Blaine [View Document](#), and "Statistical Aspects of the Cement Testing Program" by W.J. Youden [View Document](#), which can be found in Volume 59, Proceedings of the 62nd Annual Meeting of the Society, June 25, 1959, American Society for Testing and Materials.

Each laboratory receives an individualized Table of Results. The Table of Results shows the, test title, and the reporting unit in the first two columns. After that it lists in order, the laboratory's results for the odd and even numbered samples, overall averages for the odd and even numbered samples, and the laboratory's ratings for the odd and even samples.

Laboratory ratings, shown in the Table of Results for the individual laboratory, were determined in the manner described by Crandall and Blaine using a rating scale of 1 to 5 instead of 0 to 4. The ratings have no valid standing beyond showing the difference between the individual laboratory result and the average for a particular test.

The following table details the relationship between the ratings and the averages.

Ratings	Range (Number of Standard Deviations)	Number (Per 100) of Laboratories achieving the rating ¹
5	Less than 1	69
4	1 to 1.5	18
3	1.5 to 2	9
2	2 to 2.5	3
1	Greater than 2.5	1

The sign of the rating merely shows whether the result reported was greater or less than the average obtained.

Participants subscribing to the primary chemical analysis portion of this report should note that the statistics were calculated using data obtained by wet methods, and rapid methods of chemical analysis. Participants in the secondary chemical analysis should note that laboratory ratings are assigned using primary chemical statistics.

Please note that individual laboratory ratings were not given for the flow of air content mortar (test no. 190) and compressive strength mortar (test no. 230). Air content flows in the range of 87.5 ± 7.5 are satisfactory; labs with flow values outside this range will be flagged as a "Labs Eliminated" or "Labs Off Diagram" on the scatter diagram. Averages, standard deviations, and a scatter diagram are provided for your information. This information may be a helpful indicator of a problem with flow table apparatus or

¹Youden, W.J., "Statistical Aspects of the Cement Testing Program", Volume 59, *Proceedings of the 62nd Annual Meeting of the Society, June 25, 1959, American Society for Testing and Materials.*

mortar mixing procedures. Flow values of 151 were assigned to laboratories reporting a mortar flow off the flow table top.

In cases where some laboratories' results are eliminated, averages, standard deviations, coefficients of variation, and the ratings of the other laboratories' results, are recalculated using the data remaining after the elimination. Since the laboratory ratings given are the results from this one series of tests, you need not attach too much significance to a single low rating, or pair of ratings, from this one series. A continuing tendency to get low ratings on several pairs of samples should lead a laboratory to consider the types of error, systematic and random, contribute to ratings that are low. Systematic error, which is indicated by low ratings with the same signs on each pair of samples, means a consistent error is occurring in equipment and/or test procedures. One indication of random error is low ratings on both samples with different signs. Since systematic error occurs with more regularity, its cause is generally easier to find than the cause of random error.

Summary of Results

Usually, averages, standard deviations, and coefficients of variation are given with all results reported, and then with one or more outlying results omitted. Sometimes, two or more recalculations with laboratories omitted, have been done for the same test. In these cases, all of the laboratories omitted in previous recalculations are also omitted in subsequent ones. Results omitted are values that are more than three standard deviations from the mean of one or both samples. Often, elimination of these outlying results has little effect on the average, but may have a more pronounced effect on the standard deviation and coefficient of variation.

Scatter Diagrams

General scatter diagrams are supplied with this report. Crandall and Blaine describe the manner of preparing scatter diagrams, and their interpretation, in the paper published in the 1959 ASTM Proceedings. Each laboratory will receive a complete set of diagrams according to their subscription to the given program.

Using the results received from each laboratory, a scatter diagram is generated for each test method by plotting the value for the odd numbered samples on the X, or horizontal axis, against the value for the even numbered samples on the Y, or vertical axis. To find your point, just plot as you would when plotting any scatter diagram. Vertical and horizontal dashed lines, which divide the diagrams into four sections or quadrants, place the average values for the odd and even numbered samples, respectively. The first line of print under the diagram includes the test number, as given on the data sheet, the test title, and the number of data points on the diagrams. The number of plotted points may not agree with the total number of data pairs included in the analysis because a few points may be off the diagram, and some points may represent several data pairs, which are identical. Laboratories whose points are off the diagram will have a rating of ± 1 for that particular test. As described in Crandall and Blaine, a tight circular pattern of points around the intersection of the median lines is the ideal situation. Stretching out of the pattern into the first (upper right) and third (lower left) quadrants, suggests some kind of bias, or tendency for laboratories to get high or low results on both samples. Examination of the scatter diagrams indicates strong evidence of bias on many tests.

Free Lime
PORTLAND CEMENT Samples No. 213 and No. 214

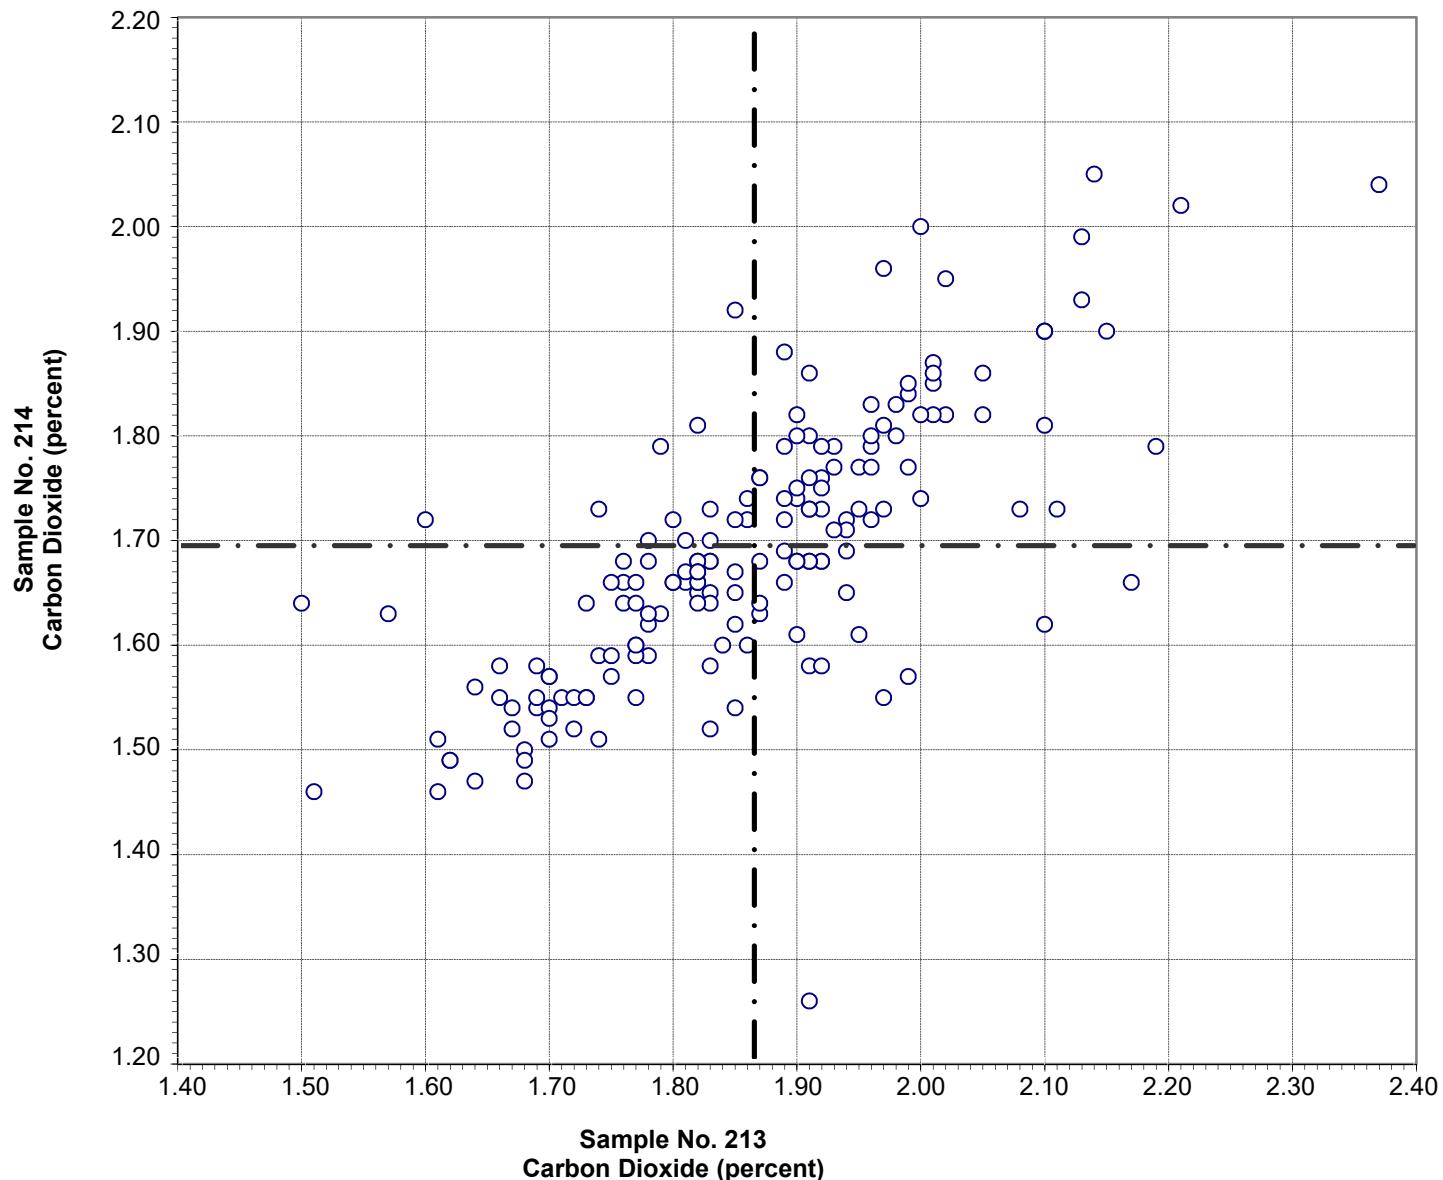

Test No. 41 Free Lime 142 Points

Sample No. 213	Ave	1.34	S.D.	0.23	C.V.	17
Sample No. 214	Ave	1.10	S.D.	0.21	C.V.	19

Labs Eliminated: 43, 78, 152, 494, 1942, 2352, 2360, 4138

CCRL Proficiency Sample Program
Carbon Dioxide
PORTLAND CEMENT Samples No. 213 and No. 214

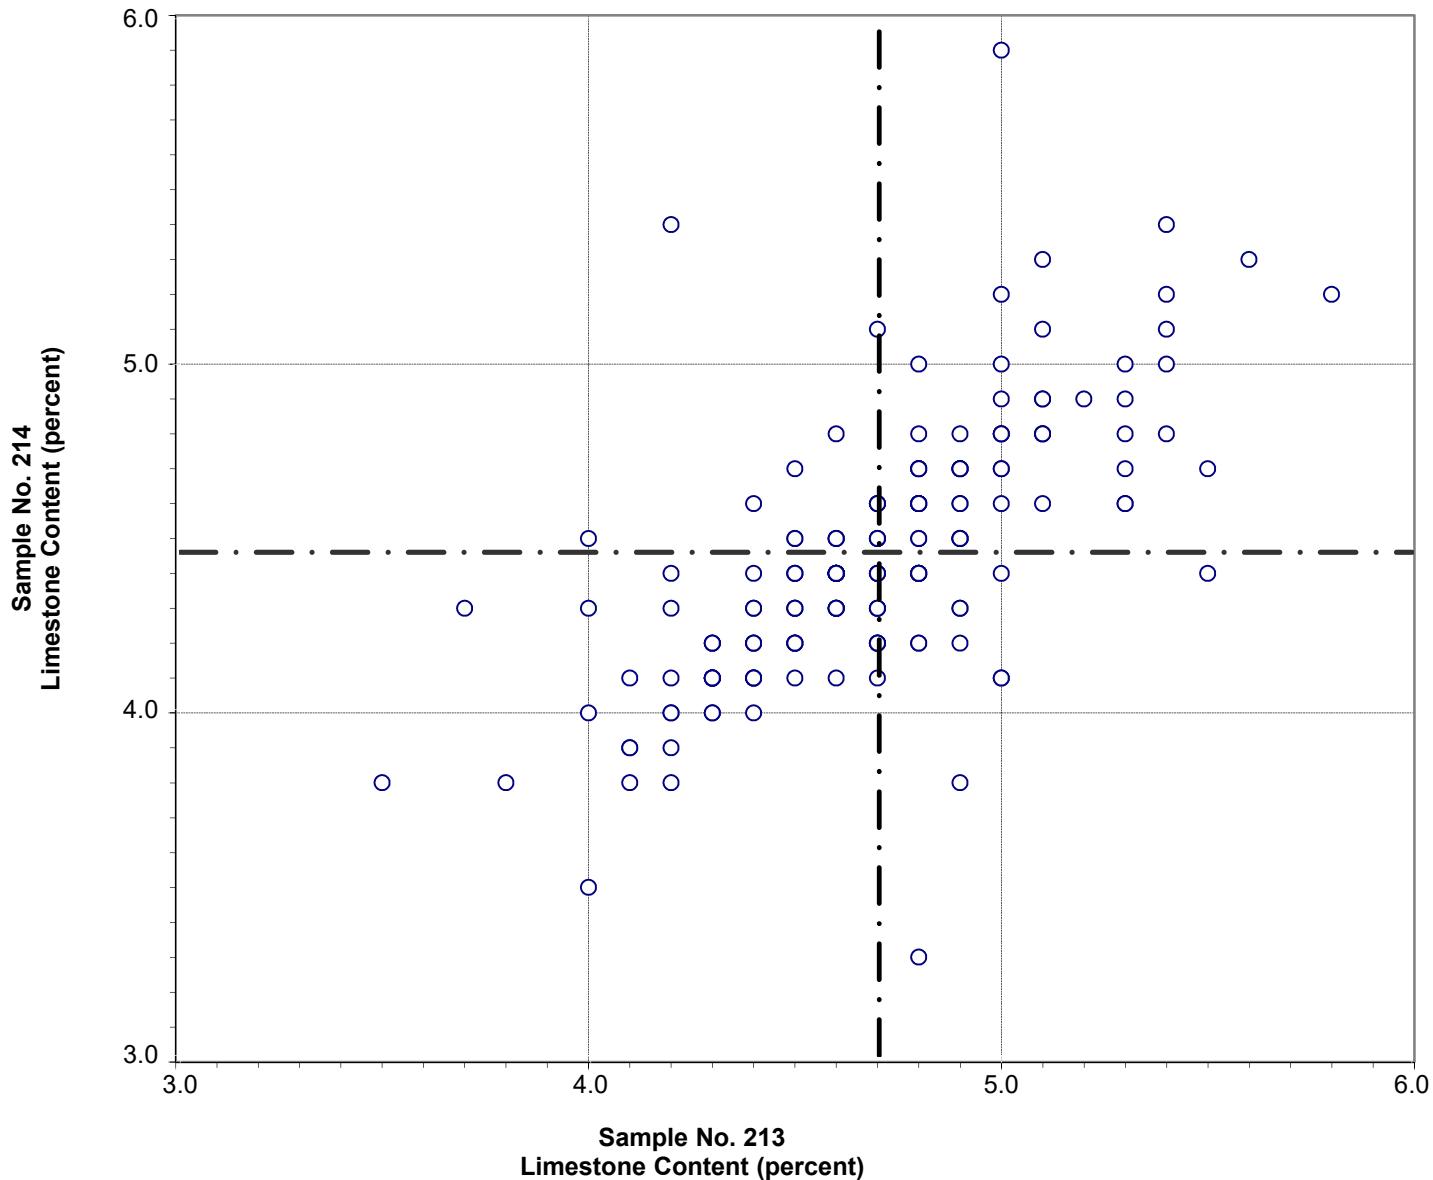

Test No. 97 Carbon Dioxide 172 Points

Sample No. 213	Ave	1.86	S.D.	0.14	C.V.	7.6
Sample No. 214	Ave	1.69	S.D.	0.14	C.V.	8.0

Labs Eliminated: 42, 246, 247, 3607, 4270, 4404

Labs off Diagram: 502

CCRL Proficiency Sample Program
Limestone Content
PORLAND CEMENT Samples No. 213 and No. 214

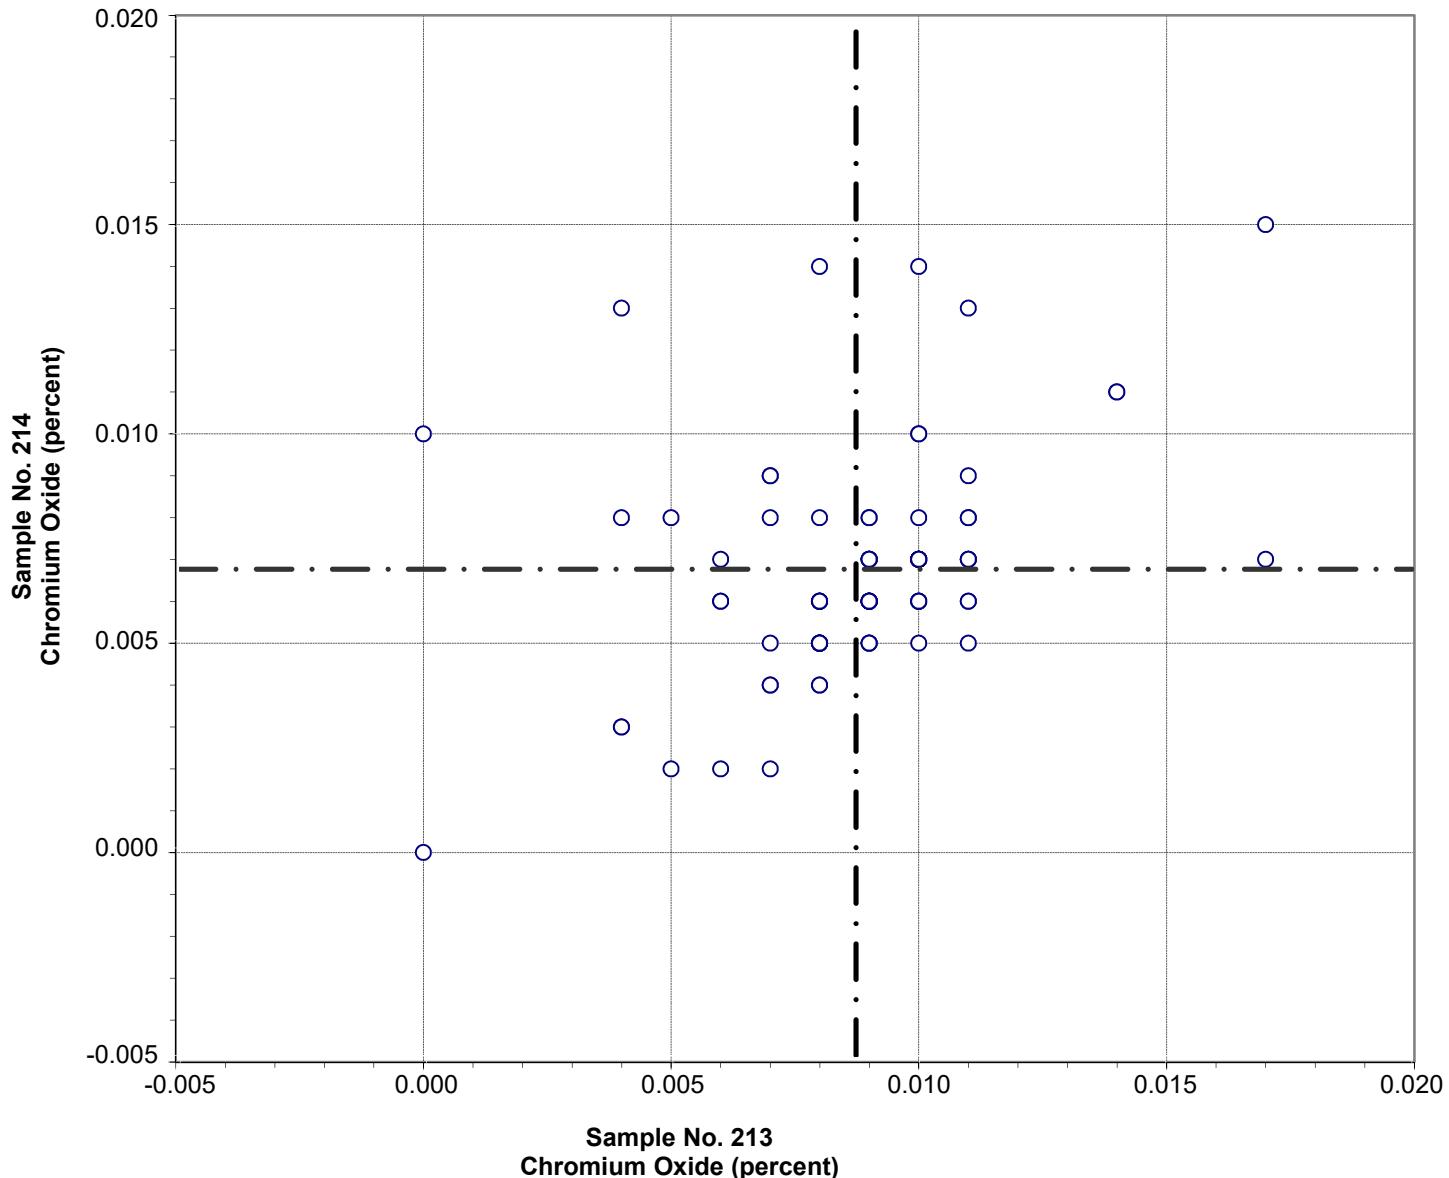

Test No. 98 Limestone Content 170 Points

Sample No. 213	Ave 4.7	S.D. 0.4	C.V. 8.4
Sample No. 214	Ave 4.5	S.D. 0.4	C.V. 8.4

Labs Eliminated: 42, 247, 440, 1657, 4404

Labs off Diagram: 3607

**CCRL Proficiency Sample Program
Chromium Oxide
PORTLAND CEMENT Samples No. 213 and No. 214**

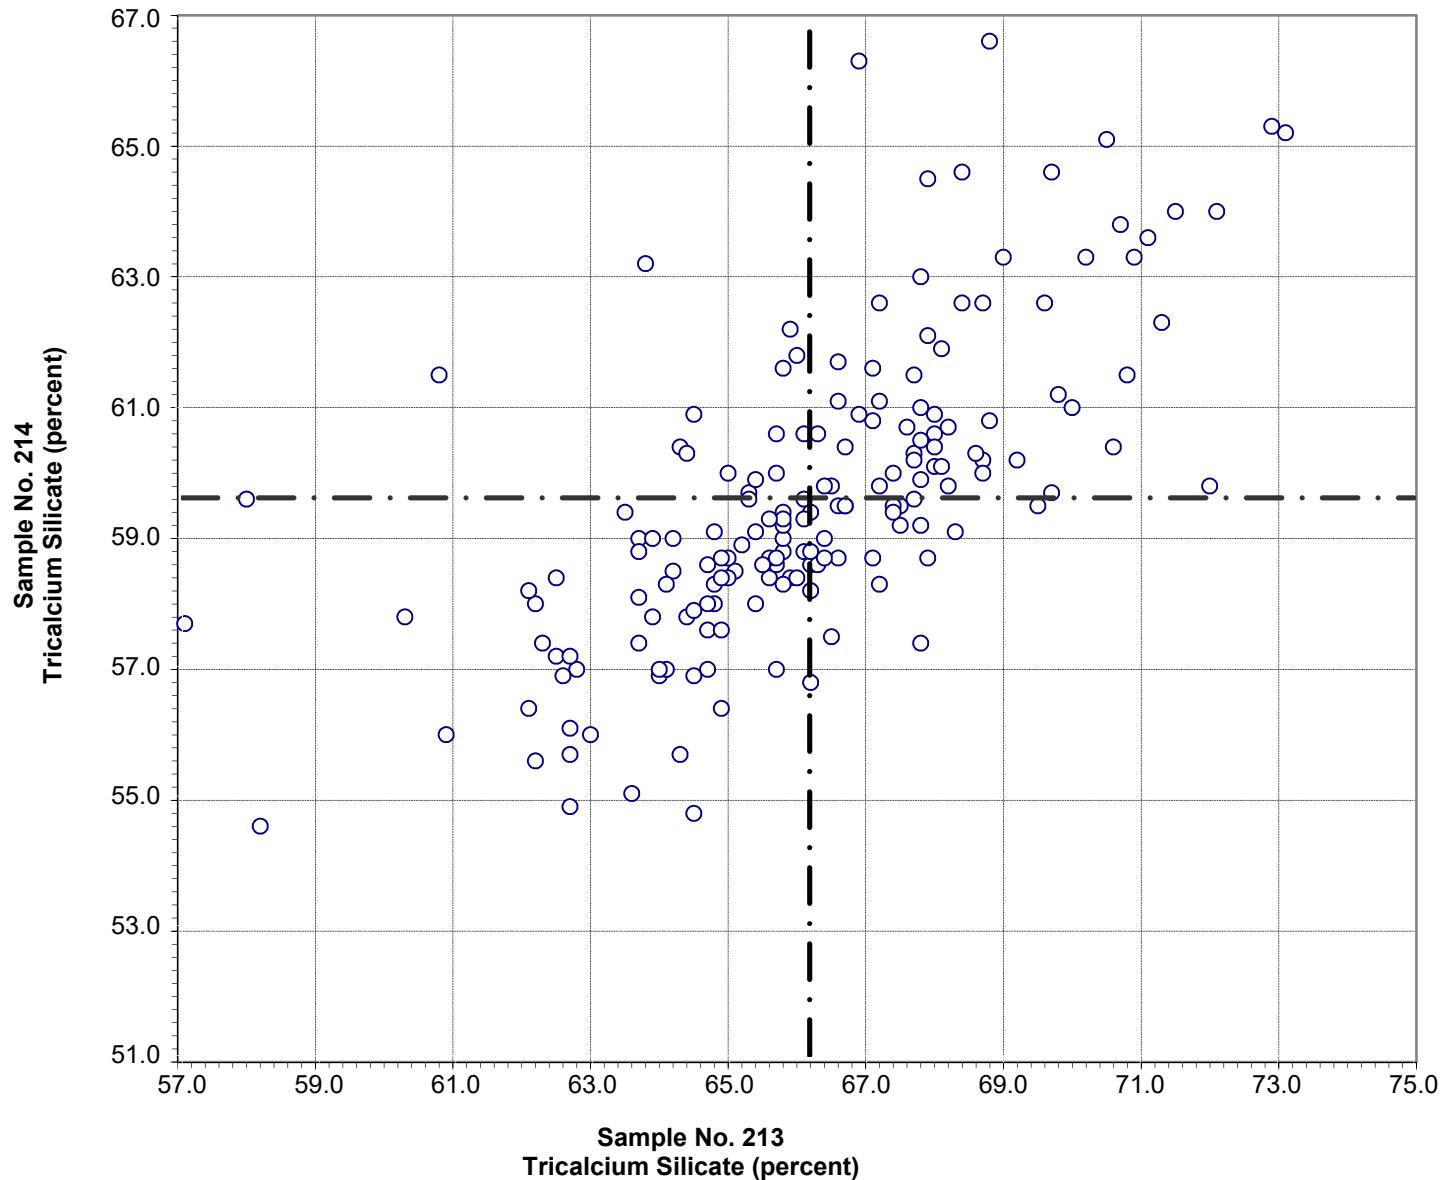

Test No. 105 Chromium Oxide 85 Points

Sample No. 213 Ave 0.009 S.D. 0.003 C.V. 31
Sample No. 214 Ave 0.007 S.D. 0.003 C.V. 39

Labs Eliminated: 66, 116, 206, 415, 493, 684, 3607

CCRL Proficiency Sample Program
Tricalcium Silicate
PORTLAND CEMENT Samples No. 213 and No. 214

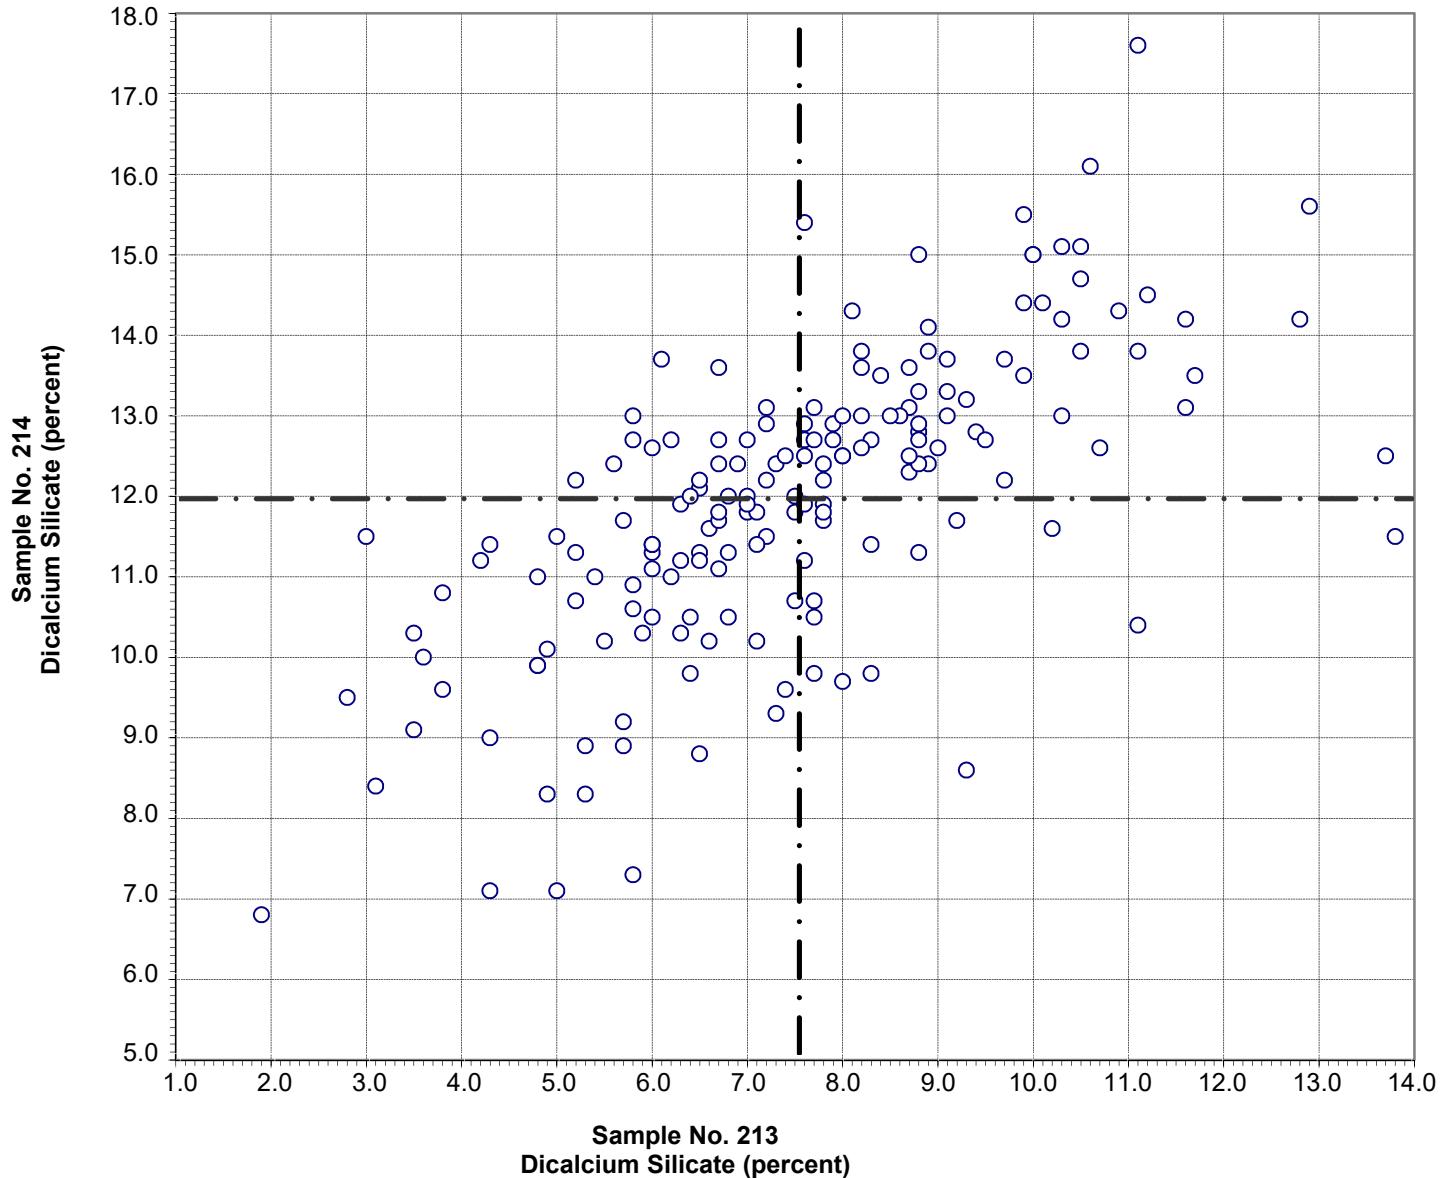

Test No. 106 Tricalcium Silicate 173 Points

Sample No. 213	Ave 66.2	S.D. 2.7	C.V. 4.0
Sample No. 214	Ave 59.6	S.D. 2.3	C.V. 3.8

Labs Eliminated: 95, 175, 246, 4297

CCRL Proficiency Sample Program
Dicalcium Silicate
PORTLAND CEMENT Samples No. 213 and No. 214

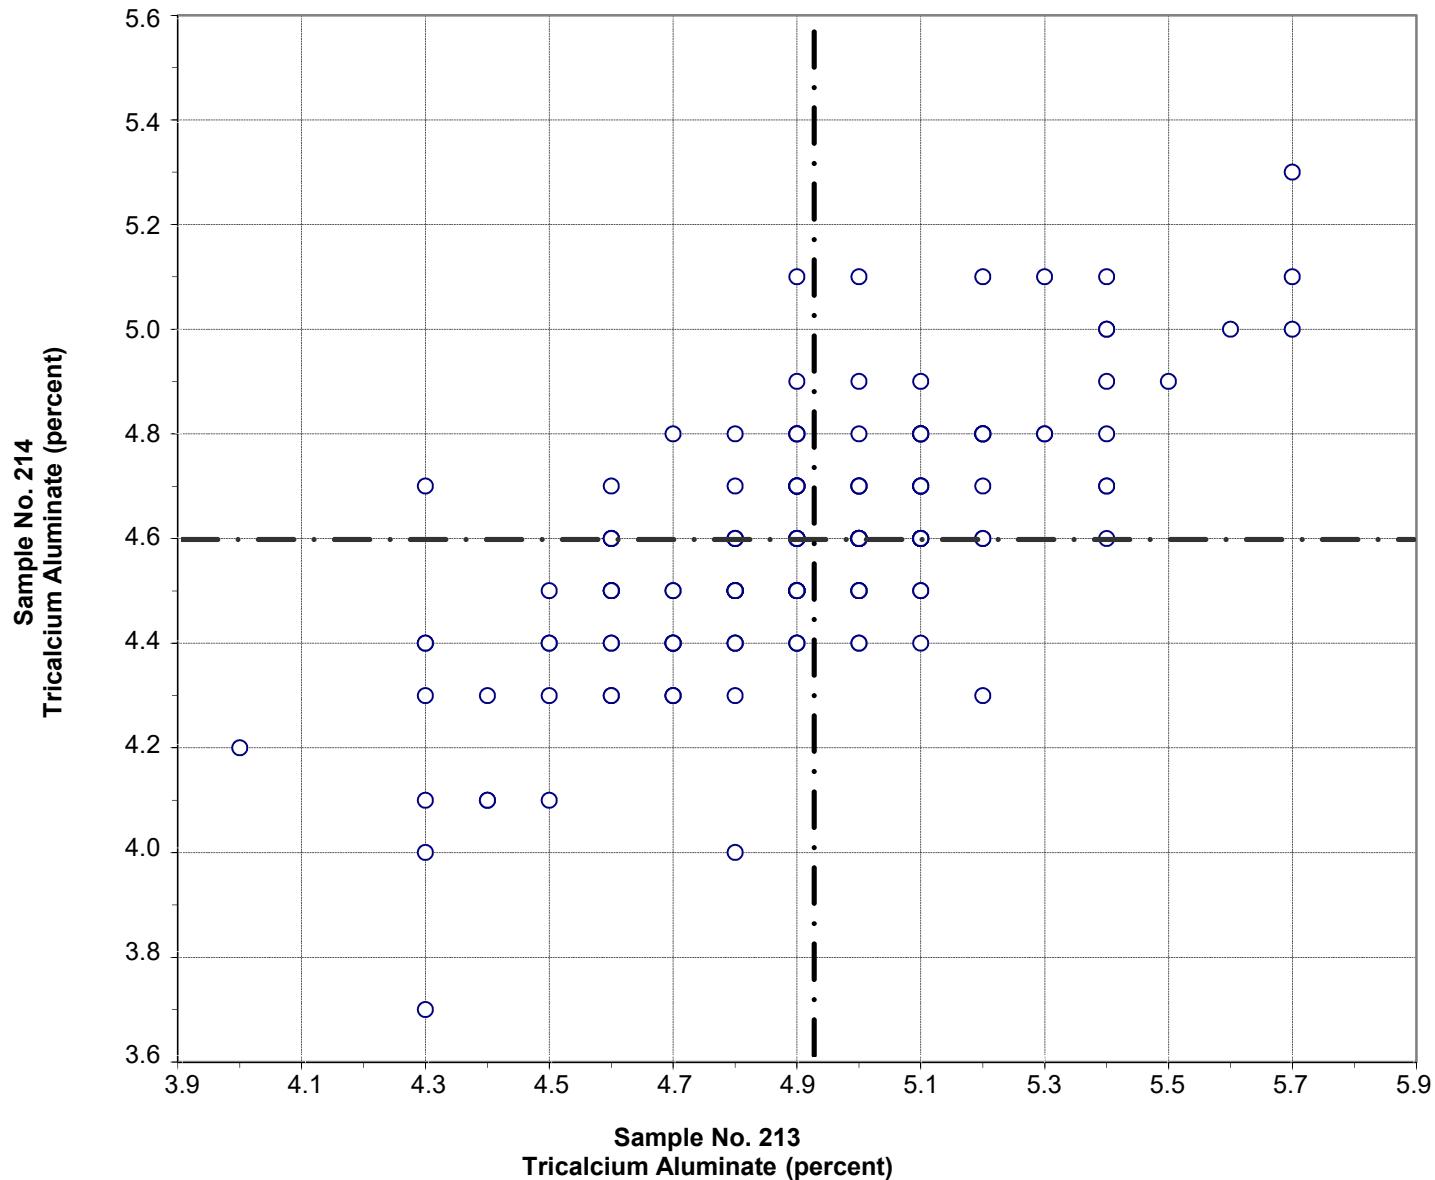

Test No. 107 Dicalcium Silicate 172 Points

Sample No. 213	Ave 7.5	S.D. 2.2	C.V. 28.7
Sample No. 214	Ave 12.0	S.D. 1.8	C.V. 15.3

Labs Eliminated: 95, 175, 246, 547, 4297

CCRL Proficiency Sample Program
Tricalcium Aluminate
PORTLAND CEMENT Samples No. 213 and No. 214

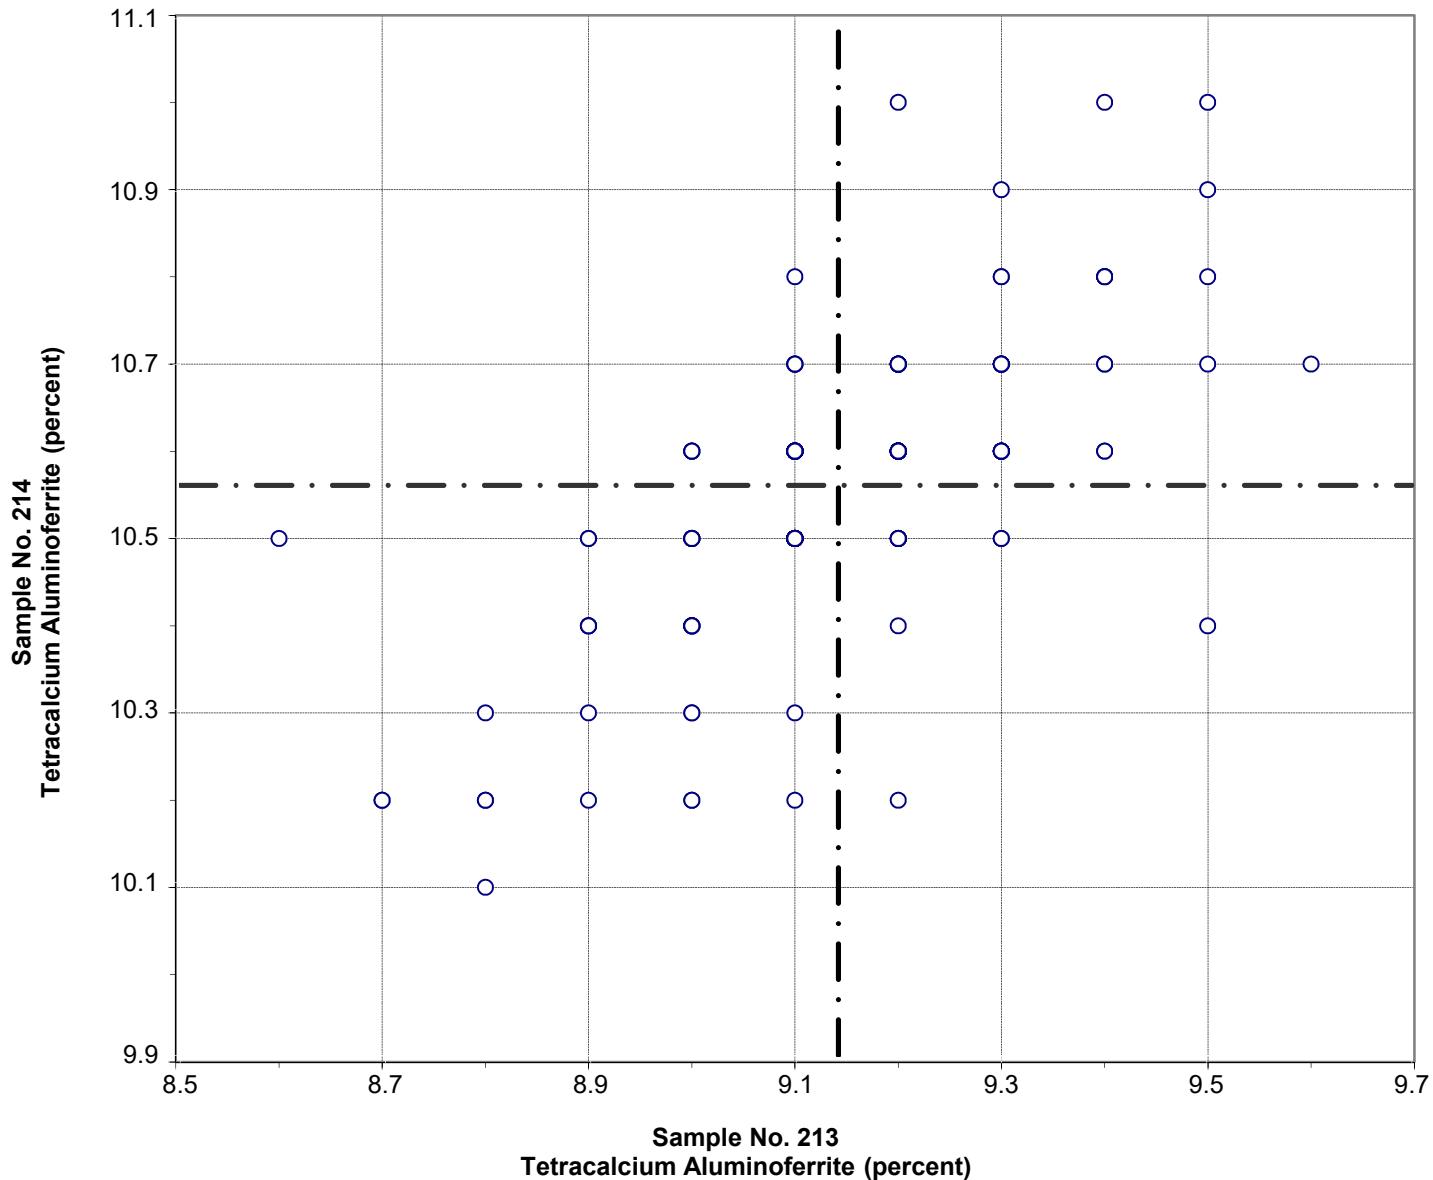

Test No. 108 Tricalcium Aluminate 172 Points

Sample No. 213	Ave 4.9	S.D. 0.3	C.V. 6.2
Sample No. 214	Ave 4.6	S.D. 0.2	C.V. 5.1

Labs Eliminated: 42, 95, 975, 3238, 4115, 4297

Labs off Diagram: 4

CCRL Proficiency Sample Program
Tetracalcium Aluminoferrite
PORTLAND CEMENT Samples No. 213 and No. 214

Test No. 109 Tetracalcium Aluminoferrite 170 Points

Sample No. 213 Ave 9.1 S.D. 0.2 C.V. 1.7
 Sample No. 214 Ave 10.6 S.D. 0.2 C.V. 1.5

Labs Eliminated: 25, 169, 206, 246, 497, 547, 3185, 3238

CCRL PROFICIENCY SAMPLE PROGRAM
 Portland Cement Proficiency Samples No. 213 and No. 214

Final Report – September 20, 2019

SUMMARY OF RESULTS

	Sample No. 213			Sample No. 214			
Test (unit)	#Labs	Average	S.D.	C.V.	Average	S.D.	C.V.
Normal Consistency - % Water (percent)							
	227	27.1	1.87	6.90	25.3	1.75	6.90
	*226	27.3	0.55	2.00	25.4	0.52	2.10
